

New from Creative Extruded Products is Eco-Trim Environmentally Friendly Universal Moldings. These moldings provide rubber performance with environmentally sound materials.

Part Numbers:

 Eco17B (17mm)

 Eco20B (20mm)

 Eco07B (7mm Cavity)

 Eco17BFL (17mm Feature Line)

 Eco20BFL (20mm Feature Line)

Key Points for Eco

- **100% recyclable material**
Uses materials that are 100% recyclable, making this molding conforming to End-Of-Life Vehicle Recycling Initiatives that are in various stages throughout the world. These materials also conform to Creative's internal recycling programs.
- **Packaging contains recycled cardboard**
By using recycled cardboard, Eco-Trim reduces the amount of landfill generated and reduces the demand for trees.
- **Contains no chlorine or lead**
Eco-Trim uses materials that do not contain potentially harmful additives; therefore, reducing the risk to the environment and ourselves.
- **Lighter weight**
Eco-Trim's unique material is lighter than the rubber material used in rubber glass moldings. By reducing weight, you can reduce the load on the auto glass technician and reduce fuel consumption.

Key Points for Trim

- **Extremely flexible in cold weather**
Eco-Trim has the same performance as rubber windshield moldings; staying extremely flexible in cold weather.
- **Doesn't bloom or chalk like rubber**
Eco-Trim's unique material does not bloom and chalk like rubber. With its cold weather flexibility and non-blooming and non-chalking surface, Eco-Trim is the preferred molding to rubber glass moldings.
- **Length stable in hot or cold**
The processing and material properties create an universal molding that is length stable in the heat and in the cold.
- **User friendly packaging**
Eco-Trim uses the planetary wound roll pioneered by Creative in 1995. This packaging keeps the molding kink and twist free making the auto glass technician's job quicker and easier.
